Zdravko Dimov
Front-End Engineer (React)

My programming roller-coaster ride began at the age of 15. Since then, I've built a **JavaScript educational page** that has influenced thousands of people, the **Code Explainer**, and there's no way I can't mention my huge love of Linux, Emacs and WMs, which is the reason for **config-modules** to exist.

Principles I highly value are:
- The tree-like structure of knowledge
- Self-education & Learn-by-doing
- Using logic (programming) for creative expression
- The whole is greater than the sum of its parts
- Facing and embracing challenges and hardship

I strive to create **friction-free applications** both **for the end user** and the **developer** because **technology is meant to bring simplicity** to our lives.

PROJECTS

Code Explainer
An innovative way of presenting code (built with React)

- Since I worked in a team with a mentor (he guided me on the business side of this SaaS), I was pressed by time and had to use many third-party services like Hotjar, Firebase, reCAPTCHA, Google Forms and others.
- I deploy and maintain the application on my Raspberry Pi. This project, among others that I've played with, has taught me the basics of Networking, Docker, Linux & Security.
- I came up with a unique idea. Made a plan, turned it into action and gained its fruits by using it over at webmaster_project to explain codes. This shows that I am initiative, creative, innovative and disciplined.

config-modules
A CLI application built with Node

- Utilizing my JavaScript (Node.js) skills, I built this CLI application that turns static config files into dynamic, in a modular approach.
- I built this tool for the sake of my own needs. I use it to dynamically change the theme of multiple i3WM utilities simultaneously, but its field of use is broader.

https://thewebmasterp.com/projects/config-modules

My FCC Projects
10+ Free Code Camp projects built with React, CSS/SCSS, HTML, JS, jQuery, d3.js and more.

PUBLICATIONS

webmaster_project
A JavaScript educational page

- Wrote comprehensive tutorials on JavaScript concepts, React, Algorithms&DS.
- Documented my programming journey in detail.
- Built strong connections with developers around the world & helped beginners.
- Got my first freelance gigs - Teaching JavaScript and web development work.
